

The internet permeates almost every aspect of our lives and Wi-Fi is the way in which most Americans get online. Wi-Fi was particularly important during the Covid-19 pandemic, allowing many to work remotely, attend virtual school, connect with friends and family while social distancing and find important public health information and guidelines.

WifiForward surveyed Americans across the country about their thoughts and experiences using Wi-Fi during the pandemic and 75% agreed that “Wi-Fi was essential to [them] during the COVID-19 pandemic.”

Overwhelmingly, people connected to Wi-Fi in their homes the most during the Covid-19 pandemic.

Wi-Fi at home proved essential during the pandemic, as over 75% of survey respondents said they connected to Wi-Fi in their homes the most during Covid-19.

Over half of respondents said Wi-Fi was important in contributing to their “adherence to local stay-at-home orders or other public health requirements.”

Nearly 60% of respondents said that Wi-Fi was important in “doing their job, including managing their schedule or communicating with employers or coworkers.”

Wi-Fi plays an important role in our daily lives — and it’s here to stay. It’s crucial for policymakers to continue crafting balanced and forward-thinking spectrum policies that enable Americans to reliably connect, work and learn online.
